

Midterm App Design Presentation Requirements

Mobile Application Development Course

1. Project Background and Requirement Analysis

Students should clearly describe:

- The target users of the application (e.g., students, teachers, community users, etc.)
- Specific real-world problems or pain points
- The core problem that the application aims to solve
- Existing similar products and their limitations

2. App System Architecture and Technical Solution

Students should explain:

- Overall implementation approach of the application
- Data storage method (e.g., SQLite / SharedPreferences / Firebase)
- Whether network functions or a server are involved (optional)
- Whether any third-party services are used (e.g., map services, AI APIs, etc.)

Requirement:

No need to draw complex architecture diagrams. The focus is on explaining *how data is stored and how the system functions are implemented*.

3. Functional Module Design

Students should clearly list the functional modules in a structured way:

- Home page
- Core functional pages

Example structure:

- User module: login
- Core function module: information posting
- Auxiliary module: settings

4. Innovation or Features (Bonus Points)

Students should describe:

- The innovative features or unique design of the application
- Advantages compared with existing similar products

5. Grading Rubric for Assignment 1

Grade Band	Features	App Navigation	Description
Starter	Add	Minimal navigation (single screen)	The app can add data but has very limited or no navigation structure.
Baseline	Add + List	Basic navigation (Add – List)	Users can add and view data with simple screen transitions.
Good	Add + List + Edit / Delete	Clear multi-screen navigation (with back navigation)	Full CRUD functionality with a clear and usable navigation flow.
Excellent	All features + Searching / Filtering / Google API	Advanced navigation (Up/Back, Navigation Drawer)	Advanced features with professional navigation similar to real-world apps.

- ✓ Each group will have 10 – 15 minutes for presentation.
- ✓ The presentation time is: May 14th, Week 11.
- ✓ The presentation order follows the group numbers.
- ✓ The mid-term report should be based on your presentation content, including Project Background and Requirement Analysis, App System Architecture and Technical Solution, Functional Module Design, Innovation or Features, and current progress. Please submit it to 学习通.
